Little Corners

Cute decor. Simple prices. Made your way.

What this is

Little Corners is a one-file online shop for a handmade decor brand. Tagline: Cute decor. Simple prices. Made your way.

Products

Product	Price	Colour
Bow-Tied Buddy Pen Stand	Rs. 99	Soft white with a red bow
Lilac Ribbed Planter	Rs. 250	Lavender purple
Sunny Bow Planter	Rs. 250	Sunny yellow with a pink bow
Artificial Mini Snake Planter	Rs. 99	Green

Pages

• Home

• Shop all and Planters

• Product pages (photo, price, details, care, shipping)

• Bag and checkout

• Make it yours (custom-order form)

• Our little story

• Owner area (orders and requests saved on the device)

Orders and delivery

• Every order adds a flat Rs. 99 delivery charge.

• Orders and custom requests are sent to littlecorner.art007@gmail.com through Web3Forms, and saved to a Google Sheet.

• Get a free access key at web3forms.com using that email, then paste it into W3_KEY in index.html. Until you do, customers see an email link instead.

• If the automatic send is blocked, the customer sees a link that opens an email with the details filled in.

Ask Little Corners AI

• A chat button on every page. Customers describe what they need, their budget and colours.

• Shop products are shown with photo, price and link. Prices come only from the product list, never from the AI.

• Custom ideas (for example pipe-cleaner flower bouquets and flower clips) are labelled as made to order, with no price. A button sends them to the custom-order form with details filled in.

• Unclear requests get one follow-up question.

• Built-in rules work on their own. The AI is used when available, and the rules take over if it is not.

• To use a server-side AI, set CHAT_ENDPOINT in index.html to your function URL. Keep the API key on the server only.

Edit your products

• Open index.html and find the P list near the top of the script.

• Change a name, price, colour or text, then save.

• Update the TAGS line so the assistant knows the search words for each product.

• Photos are stored inside the file. Ask Claude to swap them if you need new ones.

Put it online with GitHub Pages

• Create or open your repository on GitHub.

• Upload index.html and README.md using Add file, then Upload files.

• Go to Settings, then Pages, choose branch main and folder / (root), and save.

• Your site appears at https://anshdeepshandilya-ux.github.io/little-corner/ after a minute or two.

• Send a test order to check the email arrives.
